

DE-3 Final Project

Ersan Kucukoglu

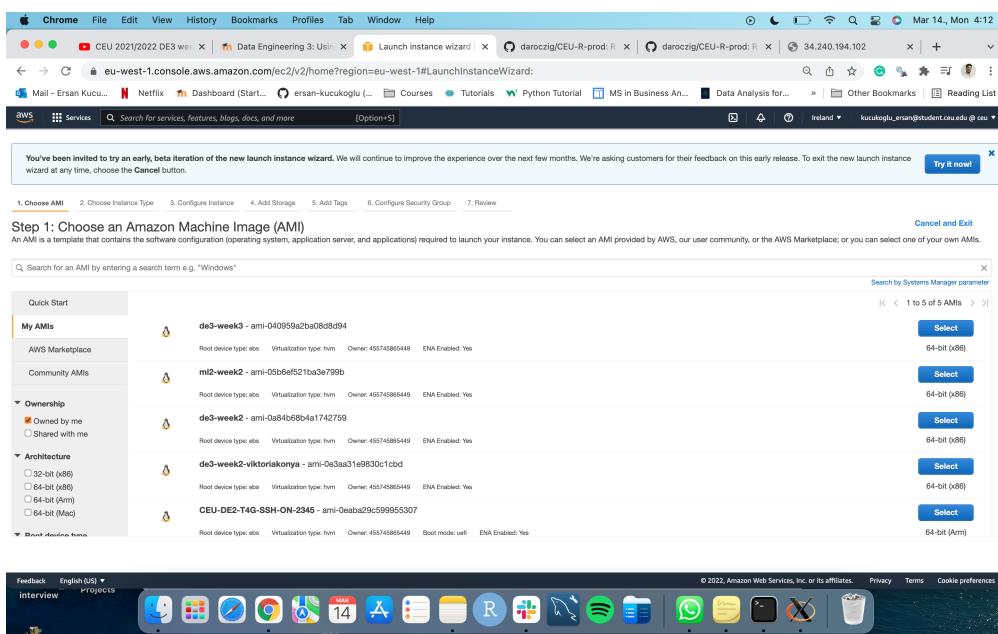

2022-03-26

- Instance ID: i-0338bc99ab45686e4

Introduction

The goal of this assignment is how to build data pipelines using Amazon Web Services and R, creating a stream processing application using the AWR.Kinesis R package's daemon + Redis.

- As a first step, I created EC2 node. To do that I selected de3-week3 AMI (already configured).

- Then I selected an Instance Type t3a.small.

Step 2: Choose an Instance Type

	t3	t3.micro	2	1	EBS only	Yes	Up to 5 Gigabit	Yes
	t3	t3.small	2	2	EBS only	Yes	Up to 5 Gigabit	Yes
	t3	t3.medium	2	4	EBS only	Yes	Up to 5 Gigabit	Yes
	t3	t3.large	2	8	EBS only	Yes	Up to 5 Gigabit	Yes
	t3	t3.xlarge	4	16	EBS only	Yes	Up to 5 Gigabit	Yes
	t3	t3.2xlarge	8	32	EBS only	Yes	Up to 5 Gigabit	Yes
	t3a	t3a.nano	2	0.5	EBS only	Yes	Up to 5 Gigabit	Yes
	t3a	t3a.micro	2	1	EBS only	Yes	Up to 5 Gigabit	Yes
<input checked="" type="checkbox"/>	t3a	t3a.small	2	2	EBS only	Yes	Up to 5 Gigabit	Yes
	t3a	t3a.medium	2	4	EBS only	Yes	Up to 5 Gigabit	Yes
	t3a	t3a.large	2	8	EBS only	Yes	Up to 5 Gigabit	Yes
	t3a	t3a.xlarge	4	16	EBS only	Yes	Up to 5 Gigabit	Yes
	t3a	t3a.2xlarge	8	32	EBS only	Yes	Up to 5 Gigabit	Yes
<input checked="" type="radio"/>	t4g	t4g.nano	2	0.5	EBS only	Yes	Up to 5 Gigabit	Yes
<input checked="" type="radio"/>	t4g	t4g.micro	2	1	EBS only	Yes	Up to 5 Gigabit	Yes
<input checked="" type="radio"/>	t4g	t4g.small	2	2	EBS only	Yes	Up to 5 Gigabit	Yes

Step 6: Configure Security Group

Security Group	Description	Action
ceu-naival-security-group		Copy to new
ceu-saravanga		Copy to new
ceu-shahali-security-group		Copy to new
ceu-viktoria-konya-security-group		Copy to new
ceu-zoltan-security-group		Copy to new
cheemahaaire-de3	launched-wizard-12 created 2022-02-21T16:26:43.818+01:00	Copy to new
Dani_sec_group	Dani_sec_group	Copy to new
daroozgig-de3	launched-wizard-12 created 2022-02-21T16:26:39.975+01:00	Copy to new
<input checked="" type="checkbox"/> de3	For the Data Engineering 3 class	Copy to new
sg-0258e9fb	default	Copy to new
sg-04352c54ff69fcf2	dv2	Copy to new
sg-016ca83a3a37ee65	endes-naspy_DE3	Copy to new
sg-0680366441cf51db	ersan-de3	Copy to new
sg-088943aa8480f14b1	fatima.anahad-de3	Copy to new
sg-000935cd8496818b	gergeley-prep-de3	Copy to new
sg-0138ae462fec125b	ohazit.yoibi	Copy to new

Inbound rules for sg-0258e9fb (Selected security groups: sg-027be3f2a47d1e2b1)

Type	Protocol	Port Range	Source	Description
Custom TCP Rule	TCP	3737	0.0.0.0/0	shiny server
HTTP	TCP	80	0.0.0.0/0	nginx
Custom TCP Rule	TCP	8080	0.0.0.0/0	jenkins
SSH	TCP	22	0.0.0.0/0	
Custom TCP Rule	TCP	8787	0.0.0.0/0	rstudio server

3. I selected the de3 security group which is shown below.

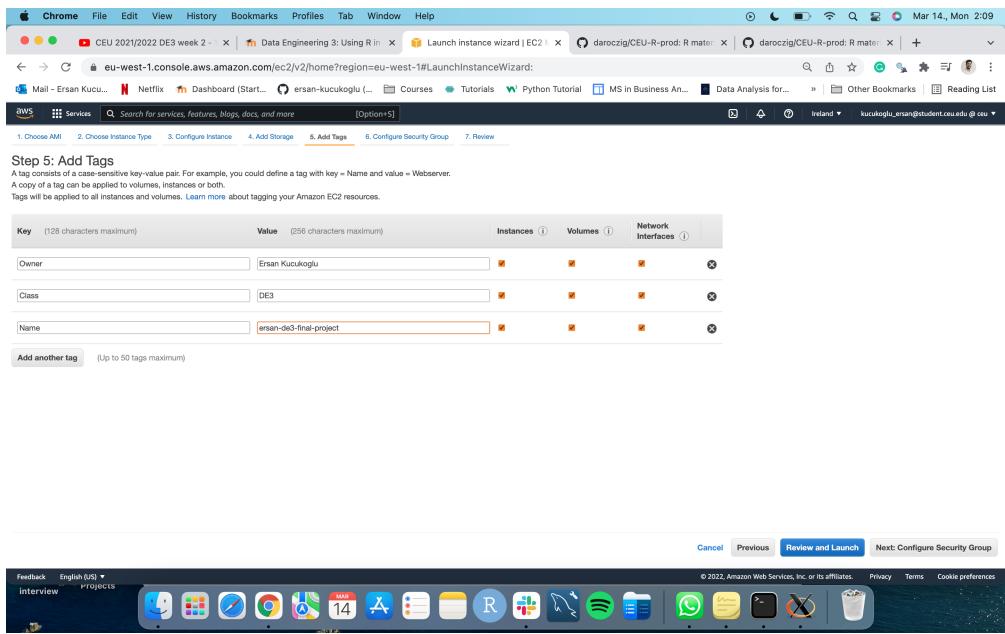

Step 6: Configure Security Group

Security Group	Description	Action
ceu-naival-security-group		Copy to new
ceu-saravanga		Copy to new
ceu-shahali-security-group		Copy to new
ceu-viktoria-konya-security-group		Copy to new
ceu-zoltan-security-group		Copy to new
cheemahaaire-de3	launched-wizard-12 created 2022-02-21T16:26:43.818+01:00	Copy to new
Dani_sec_group	Dani_sec_group	Copy to new
daroozgig-de3	launched-wizard-12 created 2022-02-21T16:26:39.975+01:00	Copy to new
<input checked="" type="checkbox"/> de3	For the Data Engineering 3 class	Copy to new
sg-0258e9fb	default	Copy to new
sg-04352c54ff69fcf2	dv2	Copy to new
sg-016ca83a3a37ee65	endes-naspy_DE3	Copy to new
sg-0680366441cf51db	ersan-de3	Copy to new
sg-088943aa8480f14b1	fatima.anahad-de3	Copy to new
sg-000935cd8496818b	gergeley-prep-de3	Copy to new
sg-0138ae462fec125b	ohazit.yoibi	Copy to new

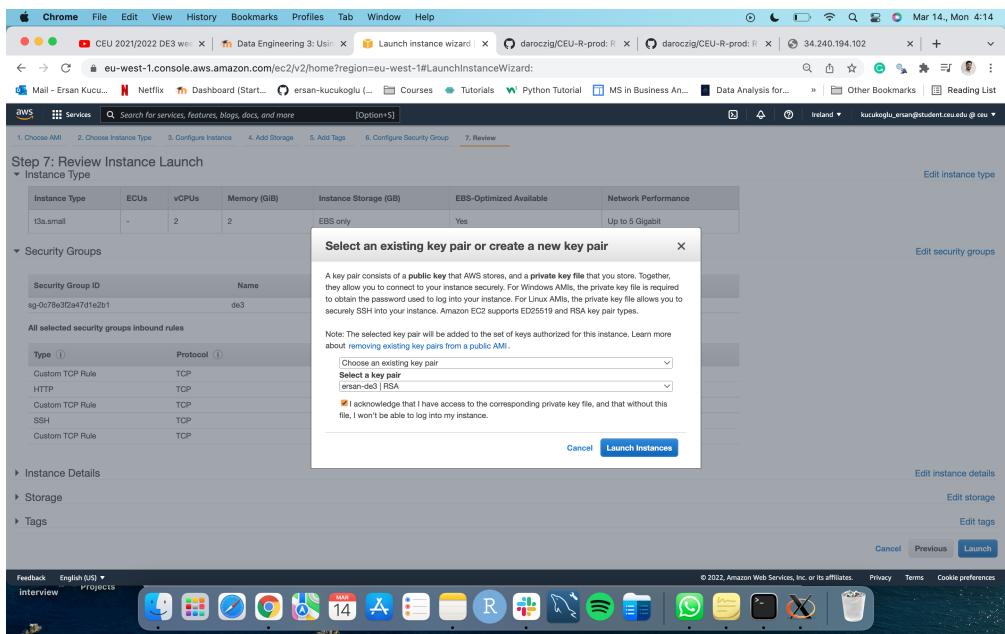

Inbound rules for sg-027be3f2a47d1e2b1 (Selected security groups: sg-027be3f2a47d1e2b1)

Type	Protocol	Port Range	Source	Description
Custom TCP Rule	TCP	3737	0.0.0.0/0	shiny server
HTTP	TCP	80	0.0.0.0/0	nginx
Custom TCP Rule	TCP	8080	0.0.0.0/0	jenkins
SSH	TCP	22	0.0.0.0/0	
Custom TCP Rule	TCP	8787	0.0.0.0/0	rstudio server

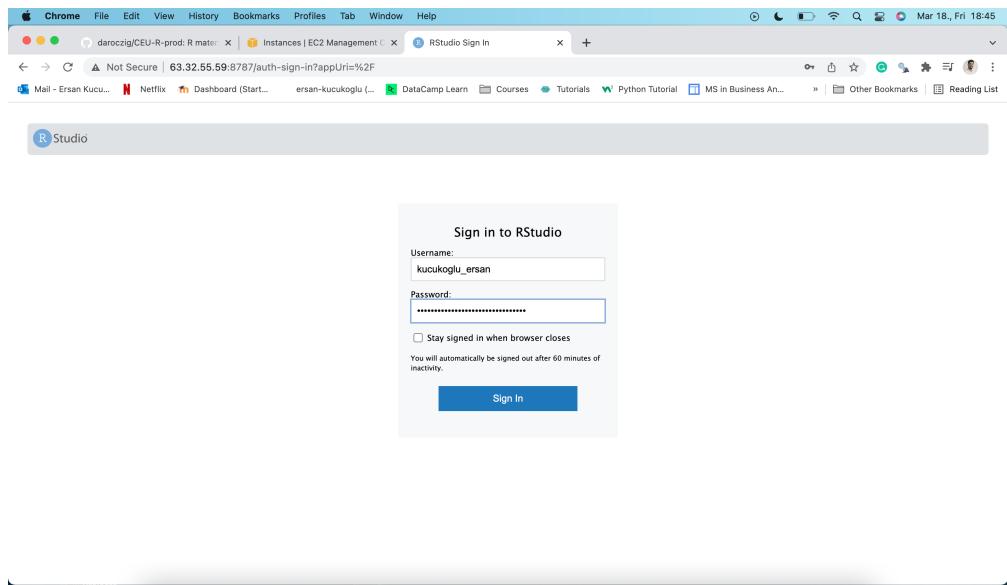

4. I added tags; owner, class, name.

5. I selected my existing key pair (ersan-de3 | RSA)

6. I opened rstudio server with my username and password

Stream Processor Daemon

- After creating a folder (ersan-streamer), I created app.properties file in the folder.

```
executableName = ./app.R
regionName = eu-west-1
streamName = crypto
applicationName = my_streamer_app_ersan
AWS Credentials Provider = DefaultAWSCredentialsProviderChain
```

- After that I created app.R file in the streamer folder.

```
##app.R
#!/usr/bin/Rscript
library(logger)
log_appender(appender_file('app.log'))
library(AWR.Kinesis)
library(methods)
library(jsonlite)

kinesis_consumer()

initialize = function() {
  log_info('Hello')
  library(rredis)
  redisConnect(nodelay = FALSE)
  log_info('Connected to Redis')
},

processRecords = function(records) {
  log_info(paste('Received', nrow(records), 'records from Kinesis'))
  for (record in records$data) {
    symbol <- fromJSON(record)$s
```

```

quantity <- as.numeric(fromJSON(record)$q)
log_info(paste('Found 1 transaction on', symbol, quantity))
redisIncr(paste('symbol', symbol, sep = ':'), quantity)
}

),

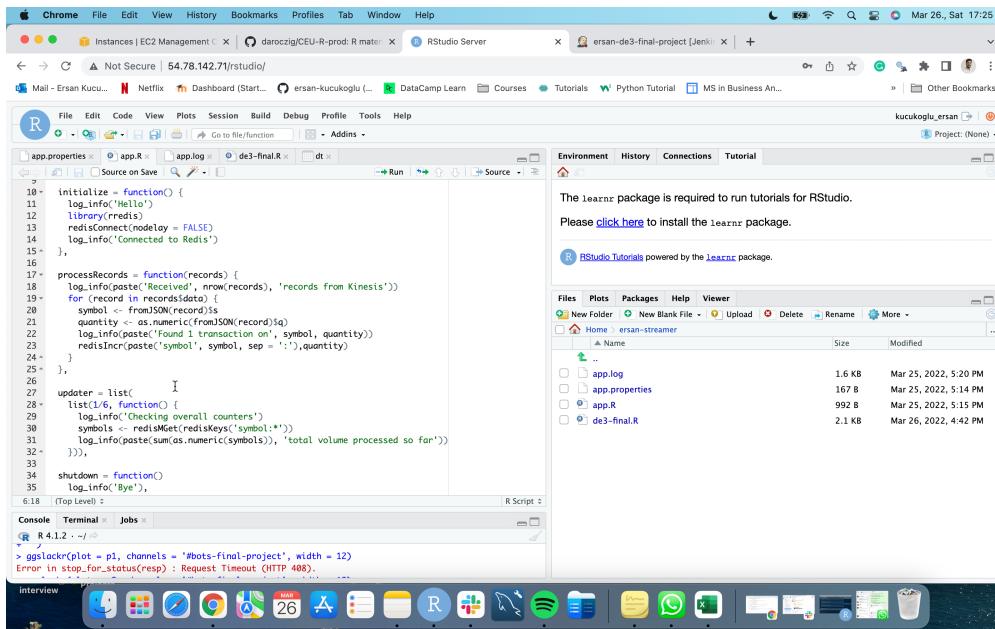

updater = list(
  list(1/6, function() {
    log_info('Checking overall counters')
    symbols <- redisMGet(redisKeys('symbol:*'))
    log_info(paste(sum(as.numeric(symbols)), 'total volume processed so far'))
  }),

shutdown = function()
  log_info('Bye!'),

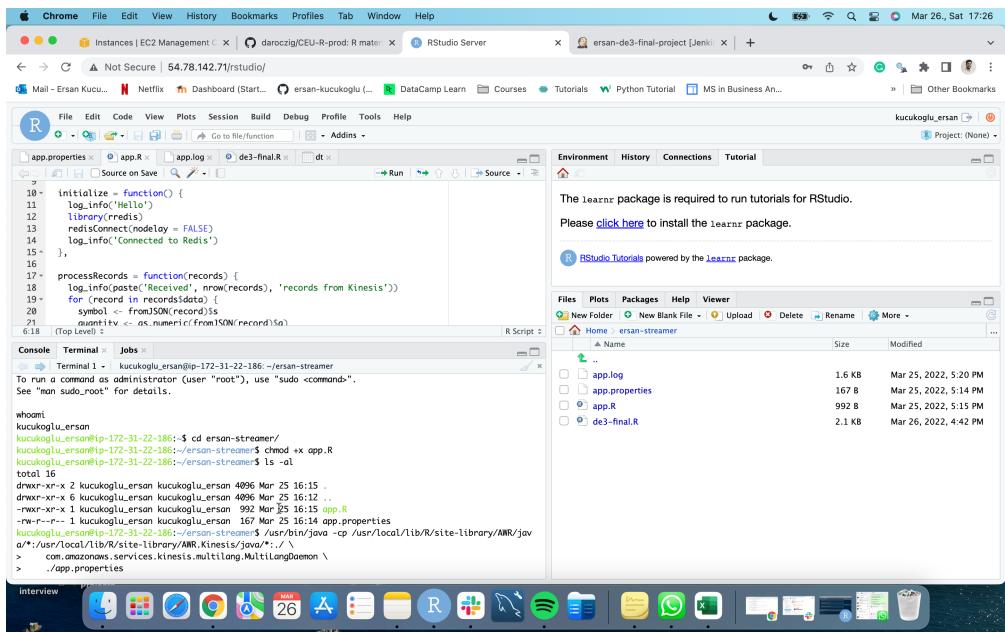

checkpointing = 1,
logfile = 'app.log')

```

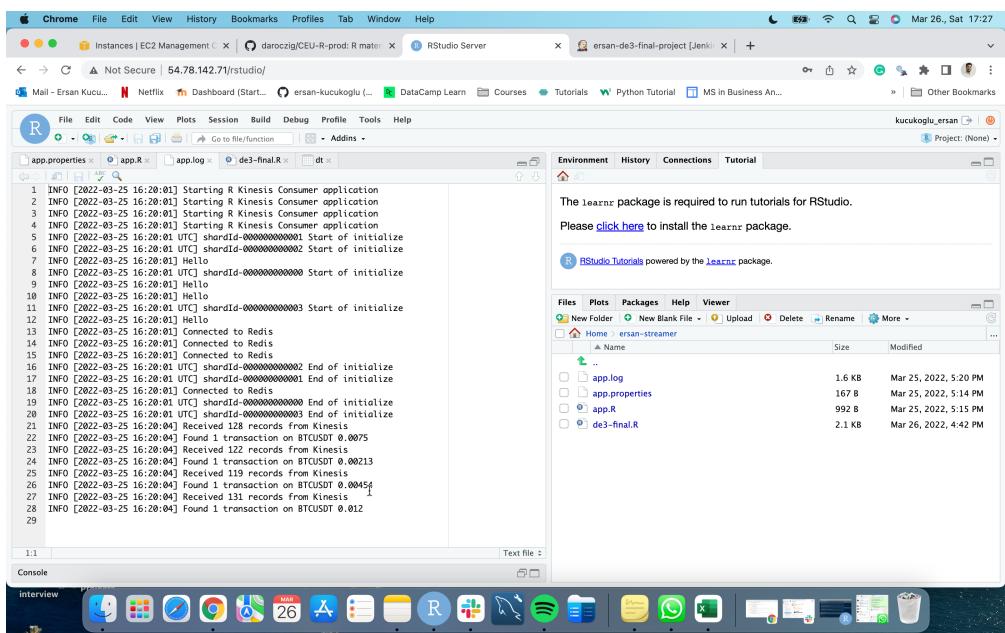

- See the files that I created in the ersan-streamer folder.

9. I ran the app using the Terminal.

- I got the app.log file and got the crypto transactions data.

- I used the streaming app to process the data from the Binance transactions and update the Redis values. I got the total price of the crypto transactions, and the plots (Coins traded by value, Quantity of crypto transactions)

```
##de3-final.R
library(binancer)
library(jsonlite)
library(ggplot2)
library(data.table)
```

```

library(slackr)
library(scales)

library(botor)
borotor(region = 'eu-west-1')

library(rredis)
redisConnect()

symbols <- redisMGet(redisKeys('symbol:*'))
symbols <- data.table(
  symbol = sub('^symbol:', '', names(symbols)),
  N = as.numeric(symbols))

symbols[, symbol := substr(symbol, 1, 3)]

symbols[, .(quantity = sum(N)), by = symbol]

prices <- binance_coins_prices()
dt <- merge(symbols, prices, by.x = 'symbol', by.y = 'symbol', all.x = TRUE, all.y = FALSE)

dt[, value := as.numeric(N) * usd]
total <- dt[, sum(value)]
totalquantity <- dt[, sum(N)]

dt[, sum(value), by = symbol]

# Print the message
print(paste0('The total price of the crypto transactions',
            ' is ', scales::dollar(total)))

p1 <- ggplot(dt) +
  aes(x = symbol, fill = symbol, weight = N) +
  geom_bar() +
  scale_fill_viridis_d(option = "cividis", direction = 1) +
  labs(
    x = "Symbol",
    y = "Quantity",
    title = "Quantity of crypto transactions"
  ) +
  coord_flip() +
  theme_minimal() +
  theme(
    legend.position = "none",
    plot.title = element_text(size = 16L,
                               face = "bold",
                               hjust = 0.5)
  )
p1
p2 <- ggplot(dt) +
  aes(x = symbol, fill = symbol, weight = usd) +
  geom_bar() +

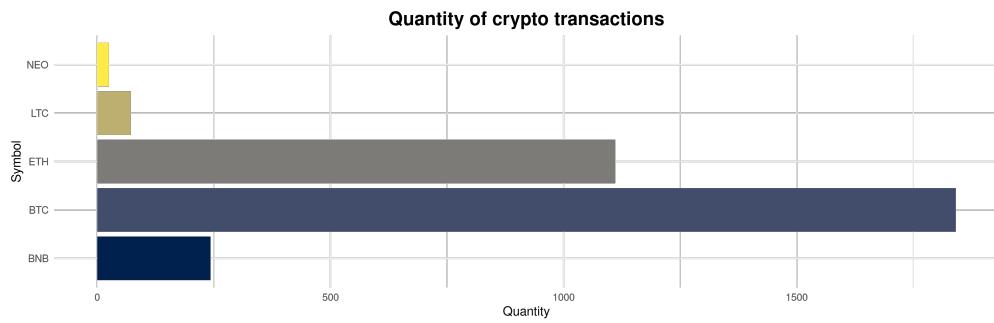

```

```

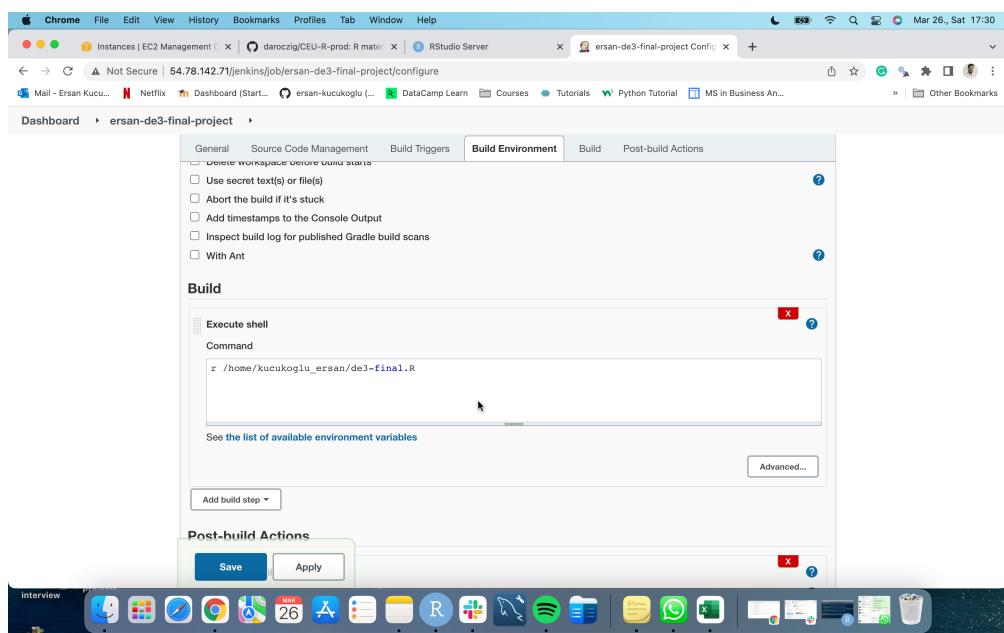

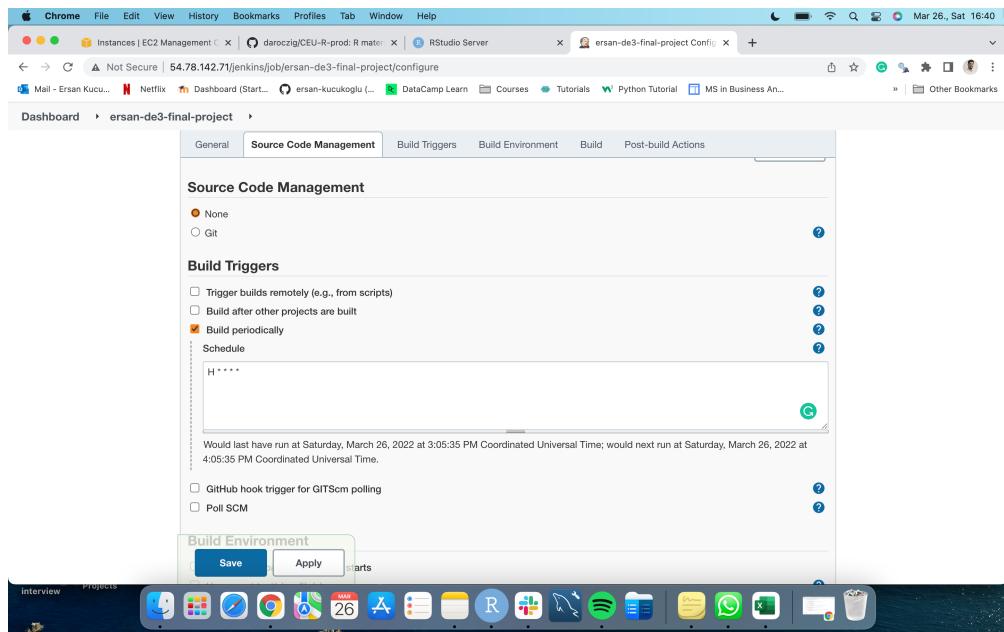

scale_fill_brewer(palette = "YlOrRd", direction = 1) +
  labs(
    x = "Symbol",
    y = "Value (USD)",
    title = "Coins traded by value"
  ) +
  coord_flip() +
  theme_classic() +
  theme(
    legend.position = "none",
    plot.title = element_text(size = 15L,
                               face = "bold",
                               hjust = 0.5)
  )
)
p2
token <- ssm_get_parameter('slack')
slackr_setup(username = 'ersan', token = token, icon_emoji = ':jenkins-rage:')
slackr_msg(text = paste0('The total price of the crypto transactions',
                        ' is ', scales::dollar(total)),
           channel = '#bots-final-project')

ggsslackr(plot = p1, channels = '#bots-final-project', width = 12)
ggsslackr(plot = p2, channels = '#bots-final-project', width = 12)

```

12. I logged in Jenkins, and created new item which is called ersan-de3-final-project. I created Jenkins job, scheduled hourly.

13. The total price of the transactions and plots are shared to the #bots-final-project channel.
